# How Cancer Cells Undergoing a Treatment Course Evolve to Survive Multiple Mass Extinctions

Adam Cheong[1,2], Mark Cheong[2], and Paul Fong[3]
[1]Proof School, [2]UC Berkeley, [3]Duke University

## Project Summary

## Introduction

Antibody-Drug Conjugates Show Superior Response when Dosed at MTD

## Research Question

How to Make a Tumor Microenvironment "Most Unfit" Under Press-Pulse?

## Methods — Growth

Modeling Tumor Growth with a Gompertzian Curve

## Methods — Pulse

1. Dose at Maximal Effective Concentration — Dependent on Size of Tumor
2. Compute Dose Response Curve — for Each Tumor Size and Shape
3. Adjust Dose Response Model — as Concentration Decreases Over Time

## Discussion — Press

## Conclusions

## Discussion — Mutatio

Cancer Cells Evolve in Between Treatment Cycles to Survive Mass
